

Synthetic PDF to reproduce an iTextSharp.LGPLv2.Core bug.

No confidential content.

Encryption: Standard handler, V=1, R=2 (RC4 40-bit).

Bug: /P is written as an unsigned 32-bit int (> int.MaxValue).

PdfNumber stores it as a double; IntValue casts it to int.MinValue,
corrupting the RC4 key -> false BadPasswordException('Bad user password').

Acrobat and browsers open this file without prompting.
